OKPOUDHU DESTINY OGHENEKENO

Computer Science Graduand — IT Operations, Digital & Data

Benin City, Edo State, Nigeria · +234 707 189 0448 · kennyokpoudhu@gmail.com
0xkeno.vercel.app · linkedin.com/in/0xkeno · github.com/0xKeno

PROFILE

Computer Science graduand with six months of enterprise IT operations experience inside Nigeria's national oil and gas exploration company, and current paid experience reviewing AI-generated data against a measured quality standard. I work well inside someone else's written procedure, I check my own output before it reaches anyone, and I make decisions from data rather than preference. Seeking a structured graduate programme in IT, digital or data operations within the energy sector.

EDUCATION

B.Sc. Computer Science

Wellspring University, Benin City | 2022 – October 2026 (expected)

- Final examinations completed; results pending. On track for Second Class Upper (2:1) or above.
- Relevant coursework: Artificial Intelligence & Machine Learning, Data Structures & Algorithms, Database Systems, Software Engineering, Computer Networks, Statistics.

NYSC status: Not yet served. Expected call-up late 2026 / early 2027.

EXPERIENCE

Human Verifier / Data Annotation Contributor

Atlas Capture, Remote | Aug 2026 – Present

- Review and correct AI-generated labels against source video, identifying where a model's output diverges from what the footage actually shows — the accuracy layer between an automated system and the dataset it produces.
- Work to a strict written schema (imperative voice, named acting hand, controlled verb vocabulary, banned vague verbs) where ambiguous output is automatically rejected, on per-segment paid throughput against a published quality standard.
- Failed the qualifying assessment at 57.5% against a 70% threshold, analysed the graded error breakdown by category, corrected the specific failure patterns and passed on a later attempt — now qualified for paid production work.
- Escalated a conflict between a task brief and the platform's general guideline rather than guessing, so the work was completed against the correct standard.

IT Administration / Help Desk Intern (SIWES)

NNPC Exploration & Production Limited, Benin City | Jun – Nov 2025

- Completed the full six-month mandatory industrial placement in the IT administration function of Nigeria's national oil and gas exploration and production company. Certificate ref. NEPL/HCM/6157.
- Provided first-line support to staff across hardware, software, printing and network connectivity, escalating to senior administrators where a fix sat outside my remit.
- Administered user accounts and prepared, configured and deployed staff workstations.
- Worked inside an established enterprise access and change procedure, learning why those controls exist in a regulated operating environment before suggesting anything be done differently.
- Explained technical fixes to non-technical colleagues in language that made sense to the person in front of me — the part of the job that decided whether a fix actually stuck.

Channel Owner & Producer

The Object Files, and three further YouTube channels | 2025 – Present

- Run four channels end to end: research, editorial direction, production, publishing and performance analysis.
- Analysed a first-day traffic export covering 2,884 impressions across 91 distinct source videos and found that the 35% of referred views arriving from mechanism and how-things-work explainers produced 79% of total watch time, while the

32% arriving from listicle and rage-bait sources produced under 4%. Chose the next production from that split rather than by preference.

- Acted on a retention analysis of the first video and raised average percentage viewed from 27.7% to 46.2%, and average view duration from 2:23 to 3:33, on the second.
- Read a flagged retention “spike” against a sample of eighteen measured viewers and judged it statistical noise rather than acting on it.
- Co-run one channel with two collaborators, dividing research, production and publishing between us against a shared cadence.

PROJECTS

Personal portfolio

0xkeno.vercel.app · github.com/0xKeno/portfolio | 2026

- Designed, built and deployed a production website using Next.js (App Router), TypeScript, Tailwind CSS and Framer Motion, deployed on Vercel with automatic deployment from the main branch.
- Built for accessibility deliberately rather than afterwards: reduced-motion support throughout, semantic landmarks, a keyboard-navigable menu with focus restoration, and section labelling that reads correctly to a screen reader.
- Changed stack mid-build from plain HTML and CSS to a typed framework once the simpler route stopped serving the goal, and can explain every decision in the codebase.

TECHNICAL SKILLS

Working knowledge: TypeScript · JavaScript · React · Next.js · Node.js · HTML · CSS · Tailwind CSS · Git & GitHub · Vercel

Foundational (coursework and self-study): Python · SQL · MongoDB · REST APIs · Data structures & algorithms

IT operations: Windows workstation deployment · User account administration · First-line hardware, software and network support

Data: Annotation and verification to a written schema · Quality assurance against a published guideline · AI output review · Analytics interpretation

KEY COMPETENCIES

- **Analytical thinking —** turned a raw traffic export of 91 source videos into a production decision by separating the referrals that produced watch time from the ones that produced bounces.
- **Adaptability and learning —** failed a qualifying assessment, read the graded error categories rather than retrying blind, fixed the specific patterns and passed.
- **Relationship building —** six months supporting non-technical staff across an enterprise office; co-running a channel with two collaborators against a shared cadence.
- **Delivering results —** a production website designed, built, shipped and maintained; four channels published and running; measurable improvement in audience retention between two consecutive productions.

ADDITIONAL INFORMATION

Languages: English (fluent)

Availability: Open to Nigeria-based, hybrid and remote roles; open to relocation.

Interests: Football, played regularly. Long-form science and behavioural psychology.
